

2016: A First Look at Police Enforcement Data

An Analysis of Police Arrests, Citations and Summons Data Contributed by Fitchburg, Madison, Middleton, Monona, Sun Prairie and Verona

Prepared for the Dane County Criminal Justice Council

Report Date: November 2019

This work was made possible by the Criminal Justice Council data sharing agreement and the partnership of local police contact agencies. NCCD facilitated the data sharing agreement process, and worked with the CJC Research Team in developing this analysis.

For more information on the CJC, visit <https://cjc.countyofdane.com/>

2016 at a Glance

About The Data

In 2016, the Dane County Criminal Justice Council (CJC) started a cross-agency data-sharing initiative to integrate and analyze data across several criminal justice agencies. Cross-agency data analysis will allow the CJC to critically examine the county's criminal justice system and how key events in the criminal justice process affect outcomes for individuals and the community. The data featured in this fact sheet were provided to the CJC research team by six Dane County police departments: Fitchburg, Madison, Middleton, Monona, Sun Prairie and Verona.

The CJC research team combined the data provided by these agencies into one dataset reflecting police enforcement contacts, including those which resulted in citations, summons, and arrests for individuals age 17 and older. This represents Dane County's first effort at combining datasets from 6 municipalities. This analysis focuses on the police enforcement contact and the outcome for unique individuals. Therefore, records without enough data to uniquely identify an individual were excluded (see Appendix B).

The CJC research team acknowledges that on the street practices may differ between municipalities. These differences may account for anomalies that may be observed in the data and need further study. For this report the CJC research team considered records indicating that a person was taken into custody and booked into the Dane County Jail as a custodial arrest. Non-custodial arrests consist of a contact that may result in the referral of charges to the district attorney, a summons to appear in court, and/or a citation. The summons and/or citations category includes citations issued as a result of a traffic violation, municipal violation, as well as a summons to appear without being taken into custody. When the documentation was ambiguous regarding the custodial status or the outcome of the contact, the record was categorized as not specified. This report does not include an analysis of all calls for service or written warnings.

City Population Estimates¹

Calls for Service

Total calls for service for all agencies:
320,772

Number of Police Enforcement Contacts

41,723

Citation/Arrest Distribution

- Summated and/or Cited (n=33,044)
- Custodial Arrest and Booked (n=5,240)
- Non-Custodial Arrest/Not Booked (n=3,309)
- Not Specified (n=130)

Percentage of Total Citations and/or Summons by Municipality

Percentage of Total Jail Bookings by Municipality¹

Unknown/Missing	1.84

Who's Who?

Creating a Unique Person Identifier

One goal of the cross-agency data-sharing work is to show how individuals move from one point to the next through the Dane County criminal justice system. Currently there is no existing unique identifier across local and state agencies to effectively track an individual through this process.

To address this problem, the CJC research team assigned a unique identifier to individuals involved in the criminal justice system.

This document uses that identifier to examine the 28,897 individuals involved in the 41,723 police enforcement contacts.

Race
N = 28,897

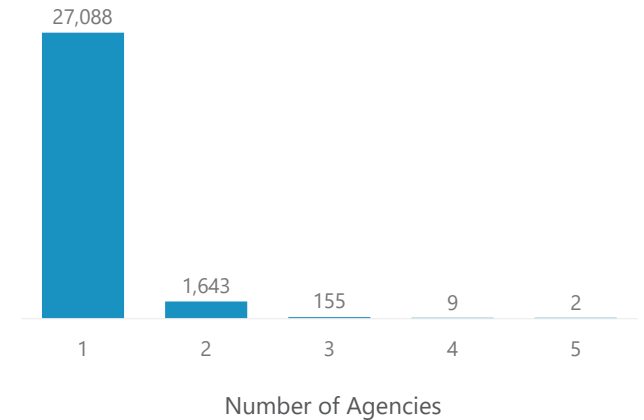

- Asian/Pacific Islander
- Black
- Native American
- White
- Unknown/Missing

Number of Individuals With Multiple Agency Contacts

6% of individuals had contact with multiple agencies.

? Hispanic/Latinx Ethnicity

More than half of records did not include an indicator for Ethnicity. With such a high missing rate, analyses could not be shown by Hispanic/Latinx ethnicity.

Number of Unique Individuals Involved in Police Enforcement Contacts

Number of Individuals Involved in Any Booking

21% of Individuals were involved in two or more jail bookings

Unique Individuals With Any Citation and/or Summons by Gender

(N = 28,897; 0.1% unknown but not shown)

58.8% 41.1%

Citations/Arrests by Race

Unique Individuals With Any Citation and/or Summons
(N = 24,098)

Number of Distinct Enforcement Contacts per Unique Individual

(N = 28,897)

Takeaways

- 21% of individuals were involved in two or more bookings. See the appendix for a breakdown of the counts of bookings and a breakdown of race among these individuals.
- According to the Urban Institute, the lack of quality data regarding Hispanic/Latinx ethnicity is a nationwide problem in the criminal justice system (For more information, see <http://apps.urban.org/features/latino-criminal-justice-data/index.html>)
- Black individuals had, on average, more charges per arrest/citation than other race groups, unless the race of the individual was unknown or missing (page 3).
- 16.6% percent of individuals involved in a police contact resulting in a citation and or summons were black, but 42.6% of individuals involved in a booking were black (page 6).
- Black individuals were more likely than individuals of other race groups to be involved in more than one police contact citation and arrest in 2016. Of black individuals, 29.8% had two or more contacts, compared to 11.2% of white individuals and 11.9% of individuals of other races (page 6).
- 23.9% of individuals between the ages of 17 and 26 during their citation/arrest are identified as black. Future research should be pursued to analyze this disparity gap.

Considerations for Future Data Analysis and Research

- This report does not take into consideration the different population sizes of the communities served by each individual police contact agency. Future analysis and research should focus on isolating the population of individuals ages 17 and older from each community to enable analyses controlling for population size.
- There were 978 individuals who had three or more police contacts during 2016. Future analyses should include a focus on individuals with multiple arrests within and across jurisdictions to examine factors that may contribute to recidivism. Increasing data sharing—as well as data sharing partners-- to include: other county/city service agencies, community partners and hospitals will help analyze the overall impact. After which, effective approaches may be developed to reduce criminal justice involvement and increase individual and community health.
- This analysis is for the year 2016 and does not reflect ongoing trends. To create a full picture, there is a potential for future research to look at nearly 323,000 calls for service and approximately 25,000 written warnings and to examine data over multiple years.
- Future research should study the data around individuals with two or more distinct police contacts.
- This analysis does not encompass all police and law enforcement activity. This reflects the aforementioned six cities and is limited to the following outcomes: citations, arrests, and bookings, as recorded by the contributing agency.
- Some custodial arrests are a result of a probation or parole violation, a warrant, and/ or a mandatory transport to Dane County Jail. A future analysis, qualitative and quantitative should include a review of the impact of all violations with a mandatory transport.
- Future analysis should also be completed yearly and utilized to track trends over time. Qualitative data should also be incorporated in future work.

¹This refers to the number of arrests with bookings, not the total number of arrests (which includes non-custodial arrests). The sample sizes differ based upon type of police contact.

²Some contacts resulting in citations also had a custodial arrest resulting in a booking into the Dane County Jail, these records were counted as Arrested and Booked.

³The number of charges does not include enhancers such as; habitual offense, weapons, domestic violence.

2012–2016 Population Estimates

	Madison	Fitchburg	Middleton	Monona	Sun Prairie	Verona
Total	246,034	27,254	18,707	7,919	31,721	12,113

Number of Records Considered for This Analysis

One of the key elements in this report is to be able to report data with great consideration at the person level. To that end, a criteria for a full record was established as having enough information to differentiate one person from another with a minimum of the following characteristics; first name, last name, and a date of birth. This criteria was further refined to having records only represented for adults (17 and older) and excludes warnings for the year 2016. The following is a summary of the **52,940** total records included in the analysis for each participating agency after all of the data cleaning steps as detailed below.

Record Drop Criteria	Madison	Fitchburg	Middleton	Monona	Sun Prairie	Verona
Related to Law Enforcement Contact in 2016	39,171	5,675	8,143	5,393	6,815	4,083
Removed 'Warning' or Voided Records	39,171	3,222	3,730	3,306	3,234	2,383
First and Last Name Recorded	39,131	3,222	3,730	3,306	3,233	2,383
Date of Birth Recorded	39,119	3,221	3,728	3,300	3,207	2,372
Adults where Age > 16	37,120	3,221	3,728	3,300	3,207	2,372
Duplicate, Voided or Documentation Error	37,118	3,221	3,727	3,300	3,207	2,367
Remaining Records for Analysis	37,118	3,221	3,727	3,300	3,207	2,367

Due to the dynamic nature of data, corrections in agency records are not reflected in this report. Any clarifications or corrections will be reflected in future versions of this report.
